- Section 7.4 Synchronization and Disconnection Procedures

   Added language clarifying notification procedures in the event of a relay trip
- Section 8 Wind Farm Requirements
  - Removed specific references to wind speed and wind direction to generalize to other meteorological parameters.
  - Added new Section 8.4 Wind Farm Rebuild / Repower to clarify commissioning required for wind farms that do not go through the PJM queue (no change in CIR value)
- Section 8.3.3 Real-time Operating Reserve Settlement
  - Updated language to reflect the wind backcast usage in settlements as well as the applicability of hybrid resources
- Section 9.1.1 Generator Deactivation Notice:
  - Updated information that may be posted publically
- Section 10.1 Black Start Selection Process:
  - Added note to enhance awareness that Black Start information is CEII and Member Confidential
- Section 11.1 Generator Data Confidentiality Procedures
  - Added language specifically naming cold weather operating limits in generator parameter data sharing procedures
- 12.3.3 Real-time Operating Reserve Settlement
  - Added new subsection with language to reflect the solar backcast usage in settlements as well as the applicability to hybrid resources
- 13.1 Marketing and Classification of Mixed Technology Facilities
  - Add reference to Manual 21B, Section 2.6
- Attachment D: PJM Generating Unit Reactive Capability Curve Specification and Reporting Procedures
  - Clarified requirements and process for submitting and updating reactive capability
  - Removed reference to AVR status since it is already covered in Section 7:Generator Operations
- Attachment E, PJM Generator and Synchronous Condenser Reactive Capability Testing, Section E.2
  - Added reference to PJM Manual, 21B Rules and Procedures for Determination of Generating Capability
- Attachment N: Cold Weather Preparation Guideline and Checklist
  - Reformatted and reordered content into additional sections and sub-sections to increase readability
  - Replaced references to "generator" with either generation resource or Generating Facility where applicable
  - Added the following language taken from NERC Generating Unit Winter Weather Readiness Guideline:
    - Incorporated bulleted list of critical components, grouped by conventional generation and inverter based generation
    - Added section covering Management Roles and Expectations

- Added section focused on Evaluation of Potential Problem Areas with Critical Components
- References section updated to reflect latest industry best practices and lessons learned
- Added footnote with link to NOAA map of locational first frost date
- Appendix A: Behind the Meter Generation Business Rules
  - o Revised to reflect current business practices
- Corrected typos, capitalization and references throughout
