

- CIR Transfer Efficiency Issue Charge states:
 - Out of Scope: Changes to the current process of transferring CIRs when the replacement resource locates at a **different POI** from the existing deactivating resource
- PJM OATT Parts VII and VIII Definitions:
 - “Point of Interconnection” shall mean the point or points where the Interconnection Facilities connect with the Transmission System
- CBIR Matrix: Design Component #6 “POI Requirements” includes a Solution Option for a replacement resource to connect at the same or electrically equivalent POI (i.e. same voltage level at same interconnection substation)
 - This Solution Option could include different breaker position/breaker arrangement

PJM Manual M14H
Section 4.9.2
